TCP/IP Module with Modbus (SCM-LAN)

Description

The SCM-LAN is a TCP/IP module that is designed to be DIN mounted inside of a Smart Connect Multi-loop control panel. It's powered and is interfaced to the panel via a RJ45 connection. The module provides a Smart Connect Multi-loop CIE with a TCP/IP connection that allows the panel to report events to an external monitoring system, such as Datalog or Zeta Remote.

Modbus:

The Smart Connect Multiloop LAN Module has a built in Modbus output. The Output allows a Modbus master to read the panel status with a Modbus 0x04 command. The data which can be read consists of:-

- General status
- Expansion modules connected
- Zone Status
- Loop Status
- Local I/O status

Technical Specifications	
Specification	SCM-LAN
Design Standard	EN54
Approval	EN54 (Pending)
Quiescent current	46.5mA
Alarm current	46.5
Connection	RJ45
Connector Type	CAT 5 Minimum
Operating Temperature	-5°C (23°F) to 40°C (104°F)
Maximum Humidity	93% non-condensing
Size (mm) (HxWxD)	103mm x 97mm x 46mm
Weight	0.2kg

Features

Designed to EN54 requirements

TCP-IP output via RJ45

Zeta Remote monitoring via a desktop PC or Smartphone via the cloud

Remote control via the cloud

Extensive front unit indications

Quick and easy to install

Extensive front unit status indications

Responsive web interface

Dimensions
